## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 1. Apparatus for ion implantation, comprising:

a source of ions having a first axis;

a workpiece holder configured [fro] for mechanical scanning in linear motion along a path of motion perpendicular to the first axis;

selectively adjustable rotation control structure for use in rotating a workpiece using the path of motion as an axis of rotation to orient an implant surface on the workpiece at a selected angle of rotation when the workpiece is mounted on the workpiece holder; and

a beam measuring device configured for scanning along an intended location of the implant surface to provide a setup measurement coincident with the intended location.

*Allowable Subject Matter*

2. Claims 1-7 are allowed.

3. The following is an examiner's statement of reasons for allowance: the prior art searched and cited failed to teach or fairly suggest an apparatus for ion implantation, having a selectively adjustable rotation control structure for use in rotating a workpiece using the path of motion as an axis of rotation to orient an implant surface on the workpiece at a selected angle of rotation when the workpiece is mounted on the workpiece holder; and a beam measuring device configured for scanning along an intended location of the implant surface to provide a setup measurement coincident with the intended location in combination with the rest of claim 1. Claims 2-5 are allowable because of their dependencies upon claim 1.

4. The prior art searched and cited also failed to teach or fairly suggest a method for ion implantation of a workpiece having the steps of measuring the effective ion beam intensity along a line in the second plane to provide a beam intensity signal; adjusting the ion beam based upon the beam intensity signal to obtain an adjusted ion beam having a desired ion beam intensity along the line in the second plane, and rotating the workpiece to present an implant surface in

alignment with the second plane in combination with the rest of claim 6. Claim 7 is allowable because of its dependency upon claim 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
